Name _____ Class _____

Advanced Higher Physics

Project: mark it yourself — worksheet

A Scottish Borders Council resource, curated by R Stewart

Remember

This pack is for practice **before** you write your report. It is never used while you write it.

Your tick list is the official **Instructions for candidates** in the Advanced Higher Physics coursework assessment task.

Use this worksheet with the **reader** on your iPad. The reader has the three scripts, the tick lists and the answers.

Scottish Borders Council resource · curated by R Stewart - November 2026 · © R Stewart Physics, Electronics and Engineering

Grid 1: script 1, determining wavelength

Script 1 is part 3 of the reader (21 pages). For each section, **write** your mark and the tick-list item you can see, or the one that is missing.

Item	Section	Max	Your mark	Which tick-list item is here, or missing?
1	Abstract	1		
2	Underlying physics	4		
3a	Diagrams and apparatus	2		
3b	How the apparatus was used	2		
3c	Complexity and demand	3		
4a	Data	1		
4b	Analysis	4		
4c	Uncertainties	3		
5a	Conclusion	1		
5b	Evaluation of procedures	3		
5c	Overall evaluation	3		
5d	Quality project	1		
6a	Structure	1		
6b	References	1		
	Total	**30**

Grid 2: script 2, measuring g with pendulums

Script 2 is part 4 of the reader (22 pages). For each section, **write** your mark and the tick-list item you can see, or the one that is missing.

Item	Section	Max	Your mark	Which tick-list item is here, or missing?
1	Abstract	1		
2	Underlying physics	4		
3a	Diagrams and apparatus	2		
3b	How the apparatus was used	2		
3c	Complexity and demand	3		
4a	Data	1		
4b	Analysis	4		
4c	Uncertainties	3		
5a	Conclusion	1		
5b	Evaluation of procedures	3		
5c	Overall evaluation	3		
5d	Quality project	1		
6a	Structure	1		
6b	References	1		
	Total	**30**

Grid 3: script 3, surface tension of water

Script 3 is part 5 of the reader (24 pages). For each section, **write** your mark and the tick-list item you can see, or the one that is missing.

Item	Section	Max	Your mark	Which tick-list item is here, or missing?
1	Abstract	1		
2	Underlying physics	4		
3a	Diagrams and apparatus	2		
3b	How the apparatus was used	2		
3c	Complexity and demand	3		
4a	Data	1		
4b	Analysis	4		
4c	Uncertainties	3		
5a	Conclusion	1		
5b	Evaluation of procedures	3		
5c	Overall evaluation	3		
5d	Quality project	1		
6a	Structure	1		
6b	References	1		
	Total	**30**

Focus tasks

The tasks are in order of marks lost, biggest first. Each one says why. Script page numbers are the ones at the top of each page in the reader.

Task 1: Graphs a marker can check (4b)

Why: One of the three biggest losses of marks. The 2025 course report says some graphs "did not include minor gridlines or used data points too large to allow for checking of accuracy of plotting".

Look at: script 1, pages 8, 13 and 17; script 2, pages 7, 13 and 20.

1 Tick each item that is true for one graph from script 1 and one graph from script 2. Write the page numbers in the top row.

	Script 1, page ___	**Script 2, page ___**
it is large enough to allow the accuracy of plotting to be checked		
scales are chosen so that the plotted points are widely spread		
it has major and minor gridlines		
each axis is labelled with the name of the quantity and the correct unit		
data points are plotted accurately		
a line of best-fit is drawn, where appropriate		

2 Compare the two graphs. Which one lets a marker check the plotting? Give two reasons.

The graph that lets a marker check the plotting is from script

Scottish Borders Council resource · curated by R Stewart - November 2026 · © R Stewart Physics, Electronics and Engineering

3 Explain why script 1's graphs on pages 13 and 17 do not lead to a good value of wavelength.

Script 1's graphs on pages 13 and 17 do not give a good wavelength because

Task 2: The whole-project evaluation (5c)

Why: The weakest section in Scotland. The 2025 course report says some pupils "simply repeated statements made in the evaluation of experimental procedures".
Look at: script 2, pages 21 and 22.

1 Tick each 5c item that script 2 covers.

	Covered?
selection of procedures	
problems encountered during planning	
modifications to planned procedures	
interpretation and significance of findings	
suggestions for further improvements to procedures	
suggestions for further work	

2 State which items have nothing written about them.

The items with nothing written about them are

3 Suggest one realistic piece of further work for a project on pendulums.

One realistic piece of further work is

Scottish Borders Council resource · curated by R Stewart - November 2026 · © R Stewart Physics, Electronics and Engineering

Task 3: Three kinds of uncertainty (4c)

Why: One of the biggest losses of marks. The 2025 course report says "Few candidates were able to address all three elements of uncertainties successfully."

Look at: script 2, pages 7 to 8, 14 to 15 and 20 to 21.

1 **Name** the three kinds of uncertainty your Instructions for candidates ask for.

The three kinds of uncertainty are

2 **Find** where script 2 uses LINEST. State what LINEST gives the uncertainty in.

Script 2 uses LINEST on page

LINEST gives the uncertainty in the

3 **Identify** which kinds of uncertainty are missing for procedure 1.

For procedure 1, the missing uncertainties are

4 **Explain** how script 2 combines uncertainties for procedure 2.

For procedure 2, script 2 combines

Scottish Borders Council resource · curated by R Stewart - November 2026 · © R Stewart Physics, Electronics and Engineering

Task 4: Describing a procedure (3b)

Why: A common lost mark. The 2025 course report says some pupils "did not describe their procedures using the past tense, or include the range and interval of the independent variable".
Look at: script 2, page 5; script 3, page 5.

1 Find two sentences in script 2's procedure 1 that are not in the past tense and impersonal passive voice. Copy them out.

Sentence 1:

Sentence 2:

2 Rewrite one of them in the past tense and impersonal passive voice.

My rewrite:

3 Tick each detail the description gives.

	Script 2, procedure 1	**Script 3, procedure 1**
the range of the independent variable		
the interval between readings		
the number of repeats		

Scottish Borders Council resource · curated by R Stewart - November 2026 · © R Stewart Physics, Electronics and Engineering

Task 5: All the raw data (4a)

Why: One mark, often lost. The 2025 course report says missing raw data "prevented them from accessing the data mark".
Look at: script 3, pages 18 to 21.

1 List the measurements a marker would need to check the surface tension values. Use the results table on page 18.

To check the surface tension values, a marker needs

2 State which of these measurements are missing from the script.

The measurements missing from the script are

3 Explain why this costs the data mark (4a), and the uncertainty marks (4c) too.

Without the raw data, a marker cannot

Task 6: Abstracts (1)

Why: One mark, and easy to lose. In the SQA scripts, one abstract lost it by leaving out a procedure and its finding.
Look at: script 1, page 3; script 3, page 2.

1 Tick what each abstract does.

	Script 1	Script 3
names every procedure		
gives a finding for each procedure		

2 Explain why one abstract gains the mark and one does not.

Script ___ gains the mark because

Script ___ does not because
