

Uni-directional restrictor

Symbol

On the kit

What it does

The slow way: air squeezes through the restrictor.

The other way: air lifts the ball. It takes the by-pass at full speed.

Kit name: flow control valve.

Key words

Restrictor

Narrows the pipe to slow the air.

Uni-directional

Slows the air one way only.

Bi-directional

Slows the air both ways.

By-pass

The other path, where air flows freely.
