

Double-acting cylinder

Symbol

On the kit

What it does

Air into the back port: the piston rod moves out. This is the **outstroke**.

Air into the front port: the rod moves back in. This is the **instroke**.

Air pushes both ways. A 5/2 valve usually controls it.

Key words

Double-acting

Air pushes the piston both ways.

Piston

The disc that air pushes along the cylinder.

Outstroke

The piston rod moves out.

Instroke

The piston rod moves back in.
